## Minimum Fireplace Dimensions

**Note:** Gas connection is from the left hand side of the appliance & electrical connection on right hand side of the appliance. A metal receptacle box is supplied/installed with the appliance to make all 120 volt electrical connections.

# G800EC COOL WALL CLEARANCES

The clearances listed below are minimum distances unless otherwise stated:

A major cause of chimney related fires is failure to maintain required clearances (air space) to combustible materials. It is of the greatest importance that this fireplace and vent system be installed only in accordance with these instructions.

### Caution Requirements

The top, back and sides of the fireplace are defined by standoffs. The metal ends of the standoff may **NOT** be recessed into combustible construction.

### WARNING

**Fire hazard is an extreme risk**  
**If these clearances (air space) to combustible materials are not adhered to. It is of greatest importance that this fireplace and vent system be installed only in accordance with these instructions.**

# G800EC VENTING ARRANGEMENTS

## Venting Arrangements for Horizontal Terminations Flex Vent or Rigid Pipe 4" (102 mm) x 6-5/8" (168 mm)

The Diagrams show all allowable combinations of vent runs with 4" (102 mm) x 6-5/8" (168 mm) venting using the Regency direct vent system or rigid vent system.

A vent guard should be used whenever the termination is lower than the specified minimum or as per local codes.

For horizontal terminations the Regency Direct Vent Flex System may be used for installations with a maximum **continuous** vent maximum horizontal length of 3ft (0.9m).

**Note: Must use optional rigid pipe adaptor (Part # 510-994) when using Rigid Pipe vent systems.**

- Maintain clearance to combustibles.
- Horizontal vent must be supported every 3 feet.
- Firestops are required at each floor level and whenever passing through a wall.

Set #1 (2" open) up to 2' horizontal  
Factory Setting - no restrictor required greater than 2'

Rear Vented

Factory Setting - No Restrictor Required

## Horizontal or Vertical Terminations Rigid Pipe Venting Systems

The minimum components required for a basic horizontal termination are:

- 1 Horizontal Termination Cap
- 1 90° Elbow
- 1 Rigid Pipe Adaptor
- 1 Wall Thimble
- 1 Length of pipe to suit wall thickness (see chart)

Wall thickness is measured from the back standoffs to the inside mounting surface of termination cap. For siding other than vinyl furring strips may be used, instead of the vinyl siding standoff, to create a level surface to mount the vent terminal. The Terminal must not be recessed into siding. Measure the wall thickness including furring strips.

If a Vinyl Siding Standoff is required (it must be used with vinyl siding), measure to outside surface of wall without siding and add 2 inches.

## Venting Arrangements With Co-linear Flex System Into a Masonry Chimney Application

**IMPORTANT:** As shown below, the unit can only be vented from the top, not from the rear.

**THE APPLIANCE MUST NOT BE CONNECTED TO A CHIMNEY FLUE SERVING A SEPARATE SOLID FUEL BURNING APPLIANCE.**

Masonry chimneys may take various contours which the flexible liner will accommodate. However, **keep the flexible liner as straight as possible**, avoid unnecessary bending.

The Air Intake pipe must be attached to the inlet air collar of the termination cap.

This appliance is designed to be attached to two 3" (76mm) co-linear aluminium flex running the full length of the chimney. See the Venting Arrangements on next page for minimum and maximum heights.
